Priority number(s): DE19971017474 19970425

Abstract of DE19717474

Letter bomb containment case makes small explosive charges impotent. It includes several flat segments (11-15) of anti ballistic material, comprising a central and peripheral segments. These fold together about their lines of connection (25). The central segment (11) has additional bracing of anti ballistic material. The peripheral segments (12-15) have fasteners to hold them in the folded, safe position.
